

Parallel Programming in Chapel: The Cascade High-Productivity Language

Chapel Team, Cray Inc.

PRACE Autumn School: October 25th, 2010

What is Chapel?

- A new parallel programming language
 - Design and development led by Cray Inc.
 - Initiated under the DARPA HPCS program
- Overall goal: Improve programmer productivity
 - Improve the programmability of parallel computers
 - Match or beat the performance of current programming models
 - Support better portability than current programming models
 - Improve the robustness of parallel codes
- A work-in-progress

Chapel's Implementation

- Being developed as open-source at SourceForge
- Licensed as BSD software
- Target Architectures:
 - multicore desktops and laptops
 - clusters of commodity processors
 - Cray architectures
 - systems from other vendors
 - (more recently: CPU+GPU hybrids)

Today's Goals

- Introduce you to the Chapel language in-depth
- Give you experience...
 - ...using the Chapel compiler
 - ...writing Chapel code
- Get your feedback on Chapel
- Point you toward resources for future reference

Who Are You?

- Name
- Institution
- Role (student, postdoc, professor, researcher, ...)
- Favorite Programming Languages
- Parallel Programming Models (MPI, OpenMP, ...)

- 11:00 Welcome
- 11:05 Background
- 11:30 Language Basics
- 12:00 Data Parallelism
- 12:30 Hands-On I
- 13:00 Lunch
- 14:30 Task Parallelism
- 15:00 Locales and Domain Maps
- 15:30 Summary and Sample Codes
- 16:00 Hands-On II
